12 Jyotirlingas of India – Project Introduction

“**12 Jyotirlingas of India**” is a spiritually inspired and informative website developed to provide users with complete details about the sacred Jyotirlingas dedicated to Lord Shiva across India. The website is designed with an attractive and user-friendly interface that combines devotion, travel information, and temple guidance in one place.

The homepage begins with a visually appealing hero section featuring Lord Shiva, creating a divine atmosphere for visitors. The website presents all **12 Jyotirlingas** in a structured card layout, where each temple contains its image, location, short description, and a “**More Information**” button for detailed knowledge.

To improve usability and provide a complete pilgrimage experience, additional sections such as **Interesting Facts**, **Major Festivals**, and **Travel Information** are included. A special **Temple Ticket Booking Popup** feature allows users to conveniently access official temple booking websites for darshan and pilgrimage planning.

The website also highlights accommodation and travel-related guidance, making it useful not only for devotees but also for tourists planning temple visits.

Key Features of the Website:

- Attractive and responsive webpage design
- Information about all 12 Jyotirlingas
- Temple images and descriptions
- Direct temple information links
- Ticket booking popup for all Jyotirlingas
- Travel and pilgrimage guidance
- Easy navigation and clean interface

This project reflects both **web development skills** and **cultural devotion**, creating an informative platform for users interested in the divine Jyotirlingas of India.

Har Har Mahadev!

MAIN ATTRIBUTES USED IN MY CODE:

href– Specifies the destination URL of a link.

src – Defines the path of an image file.

class – Applies CSS styling to multiple elements.

id – Gives a unique identifier to an element.

target="_blank" – Opens the link in a new tab.

onclick – Executes a JavaScript function when clicked.

style – Applies inline CSS styling to an element.

title – Defines the webpage title shown in browser tab.

alt– Displays alternate text if image fails to load.

type– Specifies element type.

rel – Defines relationship between linked resources.

lang– Specifies webpage language.

name – Gives name to input elements.

value– Sets default value for an element.

placeholder– Shows hint text inside input box.

disabled– Disables an element.

required– Makes input field mandatory.
